ACKNOWLEDGEMENT

My Project Titled **"Smart Social Learning & Skill Growth Platform",** would like to express my sincere gratitude to the Head of the Department of Computer Science, **Dr. Ashish Joshi**, for her constant encouragement, guidance, and academic support throughout the course of this project. Her valuable suggestions and motivation played an important role in the successful completion of this work.

I would like to extend my heartfelt thanks to my internal project guide, **Mr. Yash Panchal**, for his continuous guidance, patience, and constructive feedback at every stage of the project. His technical expertise and insightful suggestions greatly helped me improve the quality, design, and implementation of this system.

I am thankful to the **Department of Computer Science, Institute of Science & Technology for Advanced Studies & Research (ISTAR)** for providing the necessary infrastructure, learning environment, and academic support required to carry out this project successfully.

I would also like to express my sincere gratitude to my industry mentor, **Mr. Harsh Patel from Shree Hari Info Solution , Ahmedabad** for providing me the opportunity to work on this project as part of my internship. The practical exposure, professional guidance, and real-world development experience gained during the internship were invaluable to the successful completion of this project.

Finally, I express my deepest gratitude to my parents, family members, and friends for their constant encouragement, motivation, and moral support throughout the development of this project. I am truly thankful to all those who have directly or indirectly contributed to the successful completion of this work.

Thank You,
Om Patel

ABSTRACT

In today's digital era, online learning platforms and social networking applications play a vital role in knowledge sharing and professional growth. However, most existing systems focus either on structured learning or social interaction, but rarely combine both effectively. To address this limitation, this project presents the Smart Social Learning & Skill Growth Platform, a web-based application that integrates social networking features with structured skill-based learning.

The proposed system allows users to share short educational posts, code snippets, and learning resources while interacting through likes, comments, and a follow system. Each user can build a personalized profile that showcases their learning posts, selected skills, progress tracking, and reputation points earned through active participation. A skill roadmap feature enables users to plan, monitor, and track their learning journey in a structured and goal-oriented manner.

The platform also includes a powerful admin panel that allows administrators to manage users, moderate posts and comments, handle reported content, manage skills and learning roadmaps, and analyze user engagement through analytics dashboards. By combining social interaction with organized learning and progress monitoring, the Smart Social Learning & Skill Growth Platform transforms traditional learning into a collaborative, engaging, and growth-oriented experience.

1. Project Description

1.1 **Project Profile**

The Smart Social Learning & Skill Growth Platform is a web-based application developed as part of an internship project. The project focuses on combining social networking concepts with structured online learning. It allows users to share short educational posts, code snippets, and learning resources, while interacting through likes, comments, and a follow system. The platform also supports skill tracking and roadmap-based learning to help users grow systematically.

1.2 **Company Profile**

Shree Hari Info solution is a professional IT training and software development company that provides internship programs, live project training, and technical skill development for students. The company focuses on modern web technologies and industry-oriented projects, helping students gain real-world development experience. Through structured internships, Shree Hari Info solution bridges the gap between academic knowledge and practical application.

1.3 **Project Definition**

The *Smart Social Learning & Skill Growth Platform* is a web-based application designed to provide a collaborative social learning environment where users can share short educational posts, code snippets, and useful learning resources. The platform allows users to like, comment on posts, follow other learners, and track their skill development progress.

Each user can build a personalized profile showcasing their learning posts, selected skills, progress tracking, and reputation points earned through engagement. A skill roadmap feature helps users plan and monitor their learning journey in a structured manner.

The system also includes a powerful admin panel that enables administrators to manage users, moderate posts and comments, handle reported content, manage skills and roadmaps, and analyze platform engagement using analytics dashboards. This project aims to combine social media interaction with structured learning, similar to a mini version of LinkedIn, Medium, and an online learning community.

1.4 **Existing System**

In the existing system, learning platforms and social media applications work independently. Traditional learning platforms focus mainly on course delivery without strong social interaction, while social media platforms lack structured learning and skill tracking features. There is no single platform that effectively combines social engagement with organized learning and progress monitoring.

social media platforms allow users to **share posts, follow others, and interact**, but they lack **structured learning features** such as skill roadmaps, progress tracking, and educational goal management. Learning-related content on these platforms is often unorganized, making it difficult for users to track their growth or measure learning outcomes.

Additionally, most existing systems do not provide a **centralized admin control** for effective moderation of learning content, managing user activities, handling reported posts, or analyzing learner engagement through analytics. Due to this separation, learners face difficulty in finding a single platform that supports **both social collaboration and structured skill development**.

1.5 **Proposed System**

The proposed system is a **Smart Social Learning & Skill Growth Platform** that integrates **social media interaction with structured learning** in a single web-based application. The system allows users to share short educational posts, code snippets, and learning resources while engaging with other learners through likes, comments, and follow features.

Each user can create a **personalized profile** that displays their learning posts, selected skills, progress tracking, and reputation points earned through active participation.

The system also includes a **secure and powerful admin panel** that enables administrators to manage users, moderate posts and comments, handle reported content, manage skills and learning roadmaps, and analyze user engagement through analytics dashboards. This ensures content quality, platform safety, and effective learning management.

1.6 **Advantages of Proposed System**

- Combines social interaction with structured learning
- Encourages continuous learning through engagement
- Provides skill-based roadmaps and progress tracking
- Centralized platform for learning and networking
- Admin moderation ensures content quality
- User-friendly and scalable web-based solution

2. Tools & Technology

2.1 Tools

Tool	Purpose
Visual Studio Code	Code editor for development
XAMPP	Local server (Apache, MySQL, PHP)
Git & GitHub	Version control
Browser (Chrome)	Testing and debugging
Postman	API testing

2.2 Front End Technology

The frontend is developed to provide a modern, responsive, and user-friendly interface similar to professional platforms like LinkedIn.

Technologies Used:

- **HTML5** – Page structure
- **CSS3** – Styling and layout
- **Bootstrap 5** – Responsive UI design
- **JavaScript** – Client-side logic and interactivity
- **AJAX** – Asynchronous data communication without page reload

Features:

- Responsive layout for all devices
- Attractive login and registration pages
- Dynamic homepage sections
- Smooth navigation and UI consistency

2.3 Back End Technology

The backend handles business logic, authentication, database interaction, and system security.

Technologies Used:

- **PHP (Laravel Framework)** – Backend development
- **MySQL** – Database management
- **Laravel Blade** – Template engine
- **Laravel Authentication** – Login, registration, password reset

Features:

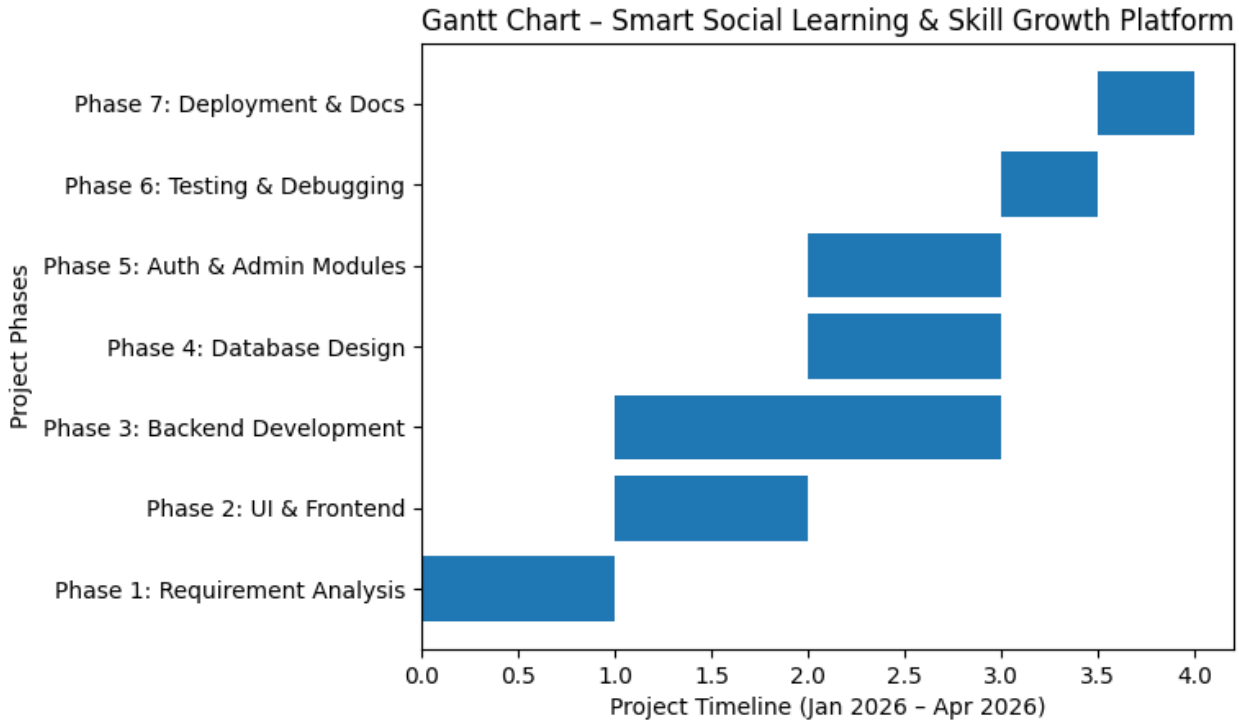
- Secure user authentication
- Role-based access (User/Admin)
- CRUD operations for posts and skills
- Admin moderation and analytics

3. Project Plan

3.1 Time Line Chart

The project is developed following a structured timeline to ensure timely completion and proper implementation of all modules. The timeline below represents the major phases of the project, planned and executed up to **18/04/2026**.

Phase	Activity Description	Duration
Phase 1	Requirement analysis & project planning	Jan 2026
Phase 2	UI design & frontend development	Feb 2026
Phase 3	Backend development using Laravel	Feb – Mar 2026
Phase 4	Database design & integration	Mar 2026
Phase 5	Authentication, user & admin modules	Mar 2026
Phase 6	Testing, debugging & optimization	Early Apr 2026
Phase 7	Final deployment & documentation	Up to 18/04/2026



This timeline ensures systematic development, testing, and successful completion of the project within the defined period.

3.2 System Model Used

The Smart Social Learning & Skill Growth Platform follows the **MVC (Model–View–Controller) architecture**, which is supported by the Laravel framework.

- **Model** handles the database structure and business logic.
- **View** manages the user interface using Blade templates and Bootstrap.
- **Controller** acts as an intermediary between the model and the view, handling user requests and responses.

The MVC model improves code reusability, maintainability, and scalability, making the system easier to enhance and manage in the future.
